Virtual Desktop Modernization

EUC Advanced Application Management Deployment

BENEFITS

- Deploy and manage End User Desktop applications with assistance from knowledgeable Nutanix Xperts

- Remove guesswork associated with configuring infrastructure, applications and policies for assured success

- Mitigate risks and accelerate time to value by leveraging our experienced consultants

OVERVIEW

The End User Computing (EUC) Advanced Application Management Deployment service assists with implementing user application management tools based on an existing desktop design, ensuring maximum performance.

Design Workshop → Template Image Creation and Optimization → **Advanced Application Management Deployment** → UAT & Migration Services

A certified Nutanix consultant delivers a comprehensive build service to validate that the application management tools are deployed according to existing design requirements and that use case requirements are met.

SERVICE SCOPE

Complete the deployment of either Citrix App Layering or VMware App Volumes infrastructure and construction of up to 5 layers. This deployment service is based upon existing design and use case documentation.

Deployment includes:
- Configuration of application management infrastructure for a single physical site with your choice of either App Volumes or App Layering
  - o For Citrix App Layering
    - Deploy a single Citrix Enterprise Layer Manager appliance
    - Configure integration to Active Directory (optional)
    - Configure integration to existing file server infrastructure (optional)
    - Configure connection to existing hypervisor or cloud infrastructure (optional)
    - Create a single existing operating system (OS) layer using an existing base OS Layer
    - Configure a single platform layer based upon the OS layer
  - o For VMware App Volumes
    - Deploy up to 2 VMware App Volumes managers
    - Configure required SQL database in existing SQL Server infrastructure
    - Install App Volumes Agent into a single existing template image

NUTANIX

PREREQUISITES

- An existing deployment design that specifies which layers need to be created and which applications or agents are contained in which layer

- A single, fully patched base OS image with only hypervisor tools installed

- Required VMware or Citrix licensing for App Volumes or App Layering

- Configure integration to Active Directory (optional)
- Configure integration to existing hypervisor infrastructure (optional)
- Install assistance for up to 5 use case-determined layers, each containing a single application or agent
  o Each layer may include a single AV security agent or a single user application
  o For AppStacks that contain multiple applications or agents, each application or agent counts against the total of 5 layers
- Configure assistance for AV security agents according to recommended practices
- Apply recommended OS and application optimizations
- Functionally validate the layers and application launch

DELIVERABLES

- Project schedule
- Project status reports
- Management infrastructure deployed per existing design
- Application layers configured per design
- As-built documentation for deployed infrastructure, policies, layers, and virtual machines (VMs)
- Project close out

TASK

MILESTONE	DURATION
Advanced application management deployment	Typically 3-5 days
