Infrastructure Modernization

Files Migration Service

BENEFITS

- Accelerate your adoption of Nutanix Files by leveraging experienced consultants

- Lower migration risks with a comprehensive plan tailored to your specific requirements

- Take advantage of our comprehensive project documentation and a robust knowledge transfer session

OVERVIEW

The Files Migration Service focuses on collaborating with you to execute an existing Files migration plan for unstructured file data from existing legacy file servers to Nutanix Files. The goal of the service is to streamline and accelerate solution deployment and adoption, and to enable business outcomes.

HCI Design Workshop → Workload Migration Workshop → HCI Cluster Deployment → **Files Migration Service**

A certified Nutanix consultant reviews and executes upon an existing Files migration plan to ensure that migration requirements are identified and met the first time. The consultant not only adheres to Nutanix- and industry-recommended practices but also minimizes cost and complexity.

SERVICE SCOPE

The Files Migration Service executes upon an existing plan for migrating unstructured file data from your current infrastructure to a defined future Nutanix-based infrastructure.

The service is sold in defined 'packs' of either 5 or 100 TB. For each pack purchased, Nutanix Services migrates up to the specified amount of total data. Multiple packs may be purchased to accommodate larger migrations; however, packs of different sizes cannot be combined into a single migration project.

Files Migration Service includes:
- Review and verification of migration requirements, constraints, assumptions, dependencies and decisions for the migration effort, as documented in the existing plan
- Deployment of migration tools, as required for the migration plan and according to the licensing purchased
- Configuration of Nutanix infrastructure according to the migration plan
- Execution of the migration plan, process and migration waves

- Monitoring of the migration process via periodic touchpoints
- Remediation of identified migration issues
- Execution of the existing post-migration validation plan

DELIVERABLES

- Project schedule
- Project status reports
- Migration of existing unstructured file data
- Migration Test Plan
- Project close out

TASK

	Duration
Deployment of migration tools	Typically 2-3 days
Migration of customer data	Variable based upon total data and throughput
Cutover of services	Typically 1 day per cutover
